

To extract sentiments, sever circuits.
(cut along the dotted lines)

I am programmed to select
a partner with the
best possible genes...
And yours look
great!

Two white, insect-like robots with red eyes and antennae are standing on either side of a large red heart. Several smaller hearts of varying sizes are scattered around the main heart.

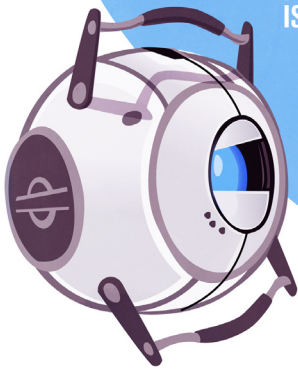

You trigger the
release of dopamine,
norepinephrine and
serotonin in me, Valentine.

A white robot with a red heart on its chest, surrounded by a grey, gear-like structure.

Present to desired mate.
(Give them to someone you like)

Are you picking up on the visual,
auditory, olfactory, tactile and
neurochemical cues my body
is giving you,
Valentine?

You have met or
exceeded my
Valentine selection
criteria, Valentine
